

Delivering fire and security upgrades across Scottish Power's critical infrastructure sites

2 key sites

Delivered under a single framework

Multi-system upgrade

Fire, CCTV, intruder and perimeter security systems integrated

NIS compliant

Aligned with Network and Information Systems Directive requirements

Overview of the challenge

Scottish Power required fire and security upgrades across multiple operational sites as part of a national improvement programme.

The two sites presented distinct challenges. Linmill required enhanced perimeter and internal security to meet NIS Directive standards, with additional scope introduced mid-project. Giffnock required a full upgrade of fire alarms, emergency lighting and security systems within a sensitive residential location.

Key challenges included managing evolving project requirements, maintaining programme momentum and delivering works within operational and community-sensitive environments.

In addition, the project required careful coordination to ensure works could be delivered safely without impacting ongoing operations or surrounding communities.

The team has been very friendly and approachable. At no point have there been any difficult conversations from either side. What I value most in our partnership is honesty and accountability."

Our Approach

Mitie Fire & Security deployed a unified project team to manage delivery across both sites, ensuring consistency, flexibility and clear communication throughout.

At Linmill, we delivered advanced CCTV, intruder and perimeter detection systems, adapting the design to incorporate additional protection for critical assets in line with updated requirements.

At Giffnock, we delivered a complete upgrade of fire and security systems, carefully scheduling works to minimise disruption to nearby residents and local infrastructure. Our coordinated delivery model enabled us to respond to project variations while maintaining programme timelines and quality standards.

Regular communication with Scottish Power stakeholders ensured alignment throughout the project and supported efficient decision-making.

Services

We deliver comprehensive fire and security services including:

- Planned and reactive maintenance
- Fire alarms and life safety systems
- CCTV, intruder alarms and access control
- Compliance reporting and digital integration

The Results

Both sites were delivered on time, to specification and without disruption to ongoing operations.

Scottish Power now benefits from upgraded, compliant fire and security systems that enhance resilience and support ongoing regulatory requirements.

The success of the programme has strengthened the partnership and created a foundation for future works across the wider estate.

The upgraded systems provide improved visibility and long-term reliability across both sites.

Why Choose Mitie

Mitie Fire & Security combines national coverage with a structured, data-driven approach to compliance. We deliver consistent performance and full visibility across complex estates, supporting safe, efficient operations.
